Deadline of Submission of 19-Jan-26
Document Number: ASB BPR 206
Document Title: Best Practice Recommendation for Mass Fatality Incident Management

Comment #	Text Line # (s)	Document Section	Type of Comment E-Editorial T-Technical	Current Document Wording	Proposed Revision	Revision Justification	*For Working Group and Consensus Body use only, not to be completed by commenter.* **Final Resolution**
1	Whole document	Whole document	T	Concerns elements that are *missing* from the document.	Either there should be a section addressing these issues here or there should be a separate document that details these steps or considerations and that document referenced in this BPR.	This document provides a useful compendium of actions that local authorities should take in mass fatality incidents, but it does not advise what should be done to preserve evidence for future legal proceedings.	Reject-document addresses this matter in 4.3
2	Whole document	Whole document	T	Concerns elements that are *missing* from the document.	An example of how this document could be revised is, in some places, there should be more detailed spelling out of the goal to be achieved rather than just what plans should be in place to do something. There might be time goals associated with the completion of certain tasks after arrival to the scene, like time period in which initial triage shoud be accomplished. Alternatively, or in addition local agencies might find it useful if an appendix was added providing a model set of policies consistent with what should be accomplished, although this might be a next project for the SAC.	This document is likely to be quite useful, but it is not a standard since it leaves the devising of means and standards for performance of the specified task up to local authorities and this means there will be lots of different ways that agencies and other responders wll go about doing these tasks. We understand why this approach has been taken as different locales will face different situations and the same locale may face incidents that must be approached indifferently. Still, more could be done to make this into a true standard.	Reject- Document is not a Standard, document is a Best Practice Recommendation
