

Join the AAFS Forensic Odontology Section

What is Forensic Odontology?

Forensic odontology, also known as forensic dentistry, is a vital branch of forensic science that applies dental knowledge in the interest of justice. Forensic odontologists are specially trained dental professionals who examine and evaluate dental evidence for use in legal investigations and proceedings.

Advance the Science

Present your casework or original research at the AAFS Annual Scientific Conference. Share findings that push the field forward and contribute to the published proceedings.

Learn from the Best

Attend scientific sessions dedicated to odontology-related research and casework. Stay current on emerging methods, technologies, and standards in forensic dentistry.

Share Your Work

Submit a poster presentation to showcase your research, active cases, or innovative techniques to a multidisciplinary forensic science audience.

Grow Your Career

The AAFS offers a structured, staged membership pathway — welcoming those just entering the field all the way through seasoned professionals seeking Fellow status.

Forensic Odontology

Human Identification

Bite Mark Analysis
